

House of Veritas

Secure estate management and digital governance for complex households and property employers.

| One platform for compliance, operations, and audit-ready accountability.

THE PROBLEM

Critical estate operations remain fragmented.

Estate operations are still managed across paper files, spreadsheets, messaging apps, and disconnected tools.

- Administrative overload
- Missed deadlines and document expiries
- Limited visibility and accountability
- Slow incident response
- Compliance and audit gaps

Fragmented tools turn routine administration into operational risk.

THE SOLUTION

One secure, structured operating layer.

House of Veritas brings essential estate workflows into one secure platform.

01

RECORDS

Documents, approvals, and staff administration

02

OPERATIONS

Tasks, incidents, assets, and vehicles

03

GOVERNANCE

Expenses, role-based access, e-signatures, and audit trails

Clarity for owners. Structure for administrators. Accountability across the estate.

WHY NOW

Professional estate operations are becoming essential.

Private estates face rising operational complexity and growing compliance expectations.

- More distributed teams
- Higher service expectations
- Greater demand for documented accountability
- Practical mobile-first workflows
- Accessible e-signatures and audit trails
- Cost-effective AI-assisted guidance

BEACHHEAD MARKET HYPOTHESIS

Start where complexity creates recurring governance risk.

South African owner-managed private households and small private estates with:

Multiple participants

Two or more recurring staff members or service providers

Recurring obligations

Staff, document, asset, incident, or approval workflows

Fragmented operations

Coordination split across messaging, paper, and spreadsheets

Budget authority

An owner or delegated manager able to adopt and fund a solution

The precise staff and complexity threshold will be validated through discovery and pilots.

PRODUCT STRATEGY

Start narrow. Expand with evidence.

Compliance first.
Estate operations next.

INITIAL WEDGE

High-friction compliance workflows

- Document tracking and expiry alerts
- Staff onboarding, records, and policies
- Incident reporting and approvals

Assets and vehicles

Expense oversight

Permissions and signatures

Audit history

Expand into the operating system for estate administration.

ILLUSTRATIVE PRODUCT WORKFLOW

One reviewable operational trail.

HOUSE OF VERITAS / COMPLIANCE WORKSPACE

Estate operations

Overview

Documents

Staff

Incidents

Approvals

Audit history

Incident & obligation workflow

On track

01

Capture issue or obligation

02

Assign accountable ow ner

03

Guide and approve action

04

Verify completion

05

Retain audit history

Latest activity

Evidence attached • Ow ner assigned • Review recorded

Controls

Role access • Escalation • Signature

TARGET CUSTOMER

Built for estates where complexity creates recurring risk.

PRIMARY CUSTOMER

Complex households, private estates, and property employers with multiple staff and recurring compliance obligations.

OPERATIONAL BUYER

Estate managers, household administrators, and operations leads.

ECONOMIC BUYER

Property owners, family offices, trustees, and estate leadership.

A high-trust customer segment with visible operational pain and meaningful downside risk.

BUSINESS MODEL

Subscription SaaS with clear expansion potential.

A recurring platform relationship that grows with estate complexity and governance needs.

CORE REVENUE

Base platform subscription with pricing by staff count, estate complexity, or modules used.

EXPANSION REVENUE

Premium reporting, AI guidance, governance controls, onboarding, and implementation services.

Land through urgent compliance pain; expand through operational value. Pricing remains a hypothesis until tested.

COMPETITIVE POSITION

Coordination tools are not governance systems.

Alternative	What it does well	Typical gap House of Veritas tests
Spreadsheets & paper	Flexible, familiar, inexpensive	Weak ownership, reminders, permissions, and audit history
Messaging apps	Fast communication and broad adoption	Decisions, evidence, and completion history become fragmented
HR & payroll tools	Strong staff administration	Limited incident, asset, household, and cross-workflow coordination
Task-management apps	Clear assignment and status	Limited household governance, approvals, signatures, and role boundaries
Property software	Building, tenant, or community administration	Often not designed around a private household employer and staff workflows

Differentiation hypothesis: operational coordination plus governance-grade accountability.

GO-TO-MARKET

Win trust estate by estate.

- Launch with high-trust pilot estates
- Target visible compliance and administrative pain
- Refine workflows through operational feedback
- Demonstrate measurable time and risk reduction
- Build case studies and reference customers
- Expand through referrals, estate networks, and trusted advisers

Positioning: risk reduction, operational clarity, and accountability—not merely convenience software.

FORWARD-LOOKING TARGETS

Milestones tied to measurable pilot value.

30 SEPTEMBER 2026 First compliance workflow digitized	31 OCTOBER 2026 Three compliance workflows digitized	31 DECEMBER 2026 Five compliance workflows digitized	
100% in-scope documents have a named owner and visible expiry status	≥50% fewer missed or late in-scope expiries	≥30% less administrator time on the selected workflow	≥90% of in-scope incidents logged within one business day

Baselines come first. Targets become evidence only after measurement against real operations.

TEAM, FUNDING USE, AND ASK

Fund specific evidence—not sprawling ambition.

TEAM

Founder-led execution

Systems architecture, enterprise delivery, and product execution with a governance-first approach.

PLANNED EXPANSION

Commercial leadership • Customer onboarding • Estate operations expertise

Early funding unlocks

Five prioritized compliance workflows

First authorized pilot deployments

Repeatable onboarding capability

Governance and commercial validation

Seeking pilot estates, trusted partners, and early-stage funding aligned to these outcomes.

Start with compliance pain

Prove value through digitized workflows
